Chapter 1 by Little pony2014

Austin is horrible disease. Nowadays many children have this kind disease. But recently behavior scientist suggest it can be treated or can be improve if those child receive examination early in their life. The best time for this test is 1 years old or even earlier -6 months. There are many way to test the disease. They test baby's reaction by playing a toy with them. During process a normal baby will have frequent eyes contacts and smile to examiner. On the contrary the baby who is silent and no much eye- contact could be earlier signs and symptoms of Austin. Those baby have earlier signs and symptoms of Austin will accept the treatment given by behavior scientist. Scientist set up connection with the brain of those baby's by specific treatment. These new development will reduce the rate of Austin occurrence.
